

# ISLAND<sup>®</sup>

## SMART SWAP<sup>SM</sup>

Island's Smart Swap feature dramatically facilitates router upgrades for existing networks

Save time and money. Faster installs means more installs. Or, more Island time.

Here's how:

### PLUG ISLAND INTO THE SWITCH

...along with the existing router

### WAIT ABOUT TWO MINUTES

Island will learn:

- The network address and submask
- IP addresses of all the devices on the network

### UNPLUG THE OLD ROUTER

- The network is ready to go
- You will need to save any DHCP reservations —just a tap and you're done

Designed, assembled, and supported in the USA
